AEEI Investment Manager Wenzhe Guo is Going to Publish a Book “*Embrace the Future: A R&D on the Environmental Utility Stock Index*”

On June 20th, AEEI Environmental Finance Institute has initiated an agenda of publishing a book on environmental and finance as a corner stone for AEEI to develop new financial products, including the development of “UE stock index future contract” and “UE stock index investment funds.”

The book was titled as *Embrace the Future: A R&D on the Environmental Utility Stock Index*, which is created by Mr. Wenzhe Guo, the General Manager of Department of Investment of AEEI. The book will introduce the theory and the assessment of the Utility of Environment (UE) approach to the publicly traded Companies on NYSE, NASDAQ, and OTC Markets. The UE approach is an innovative way of business valuations. The goal of this study is to provide one alternative investment approach for investors to shape their investment decision. The target market covers all those who are involved in the environmental protection, climate issue, renewal energy, and those who keep interested in the investment of “green stocks” and their derived financial products.

The finalized draft is scheduled to be completed by the middle of November and be published early next year. The book will be reviewed by the experts in economics, security market, and environmental protection.
