The following assumptions and predictions came from common sense, not the statistical sources nor case studies. However, our research is trying to touch the base.

1. The assumption of the timeline of the numbers of businesses on earth

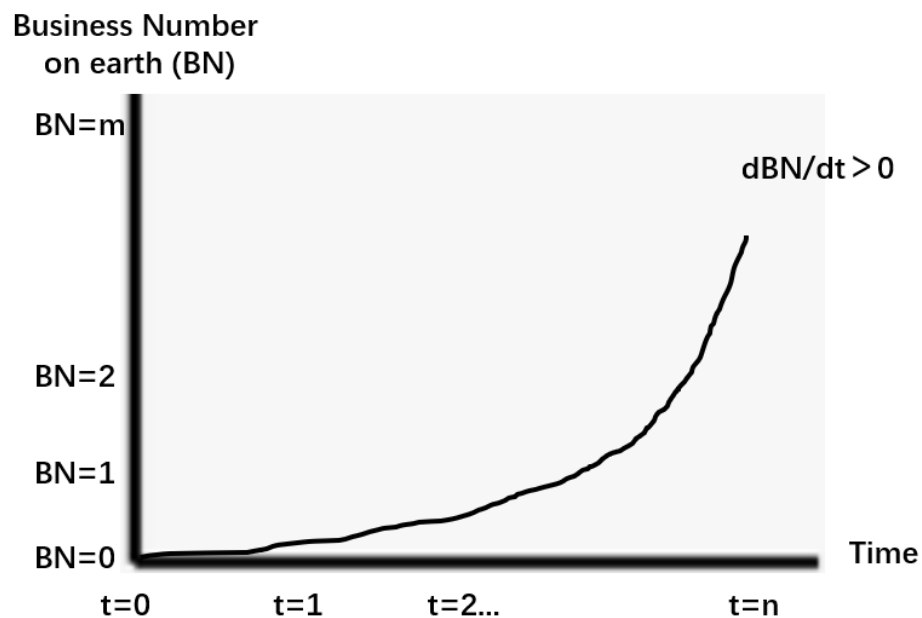

Diagram 1. The assumption of the timeline of the numbers of businesses on earth

2. The assumption of business number and scale and the ecology change

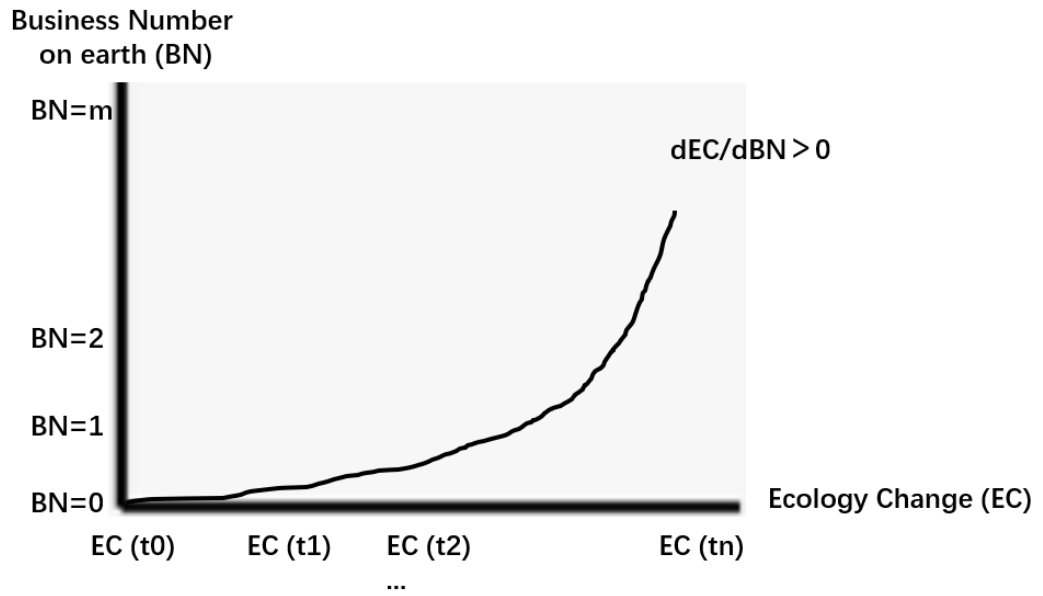

Diagram 2. The assumption of business number and scale and the ecology change

3. The assumption of the relation between original agricultural business and human health -- beneficial

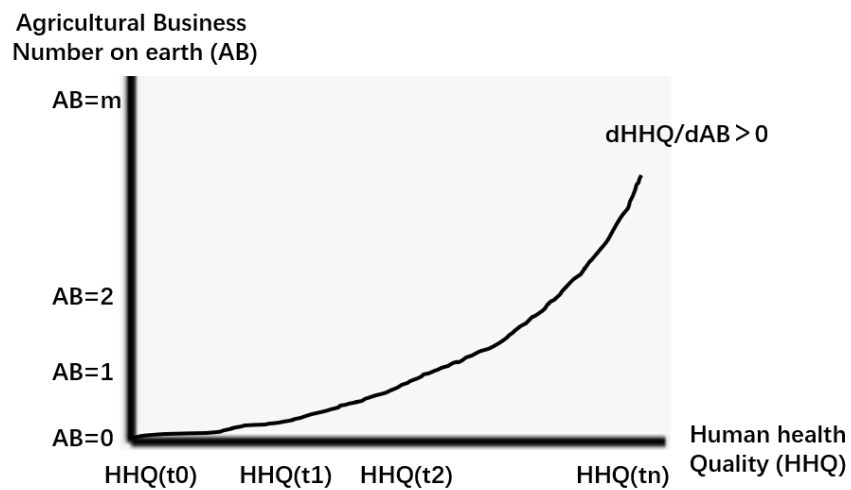

Diagram 3. The assumption of the relation between agricultural business and human health -- beneficial

4. The assumption of the relation between pharmaceutical industry and human health -- beneficial

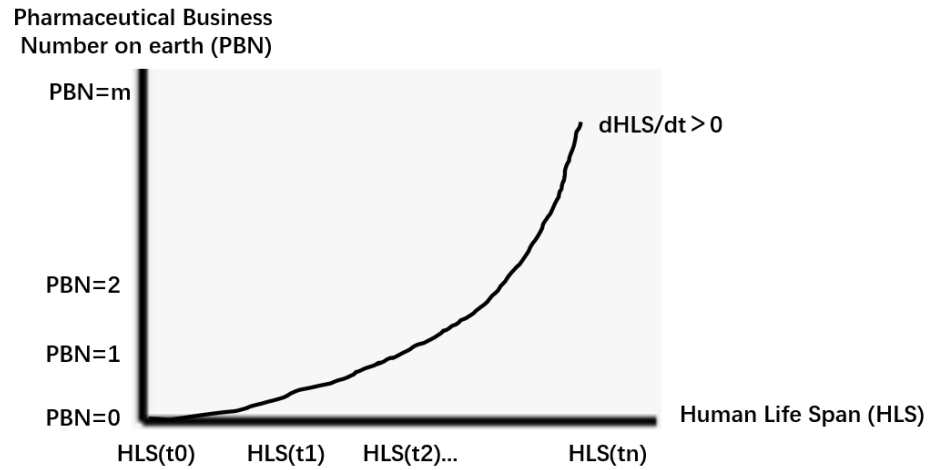

Diagram 4. The assumption of the relation between pharmaceutical industry and human health -- beneficial

5. The assumption of the relation of Chemical industry, pollution, and human health – harmful

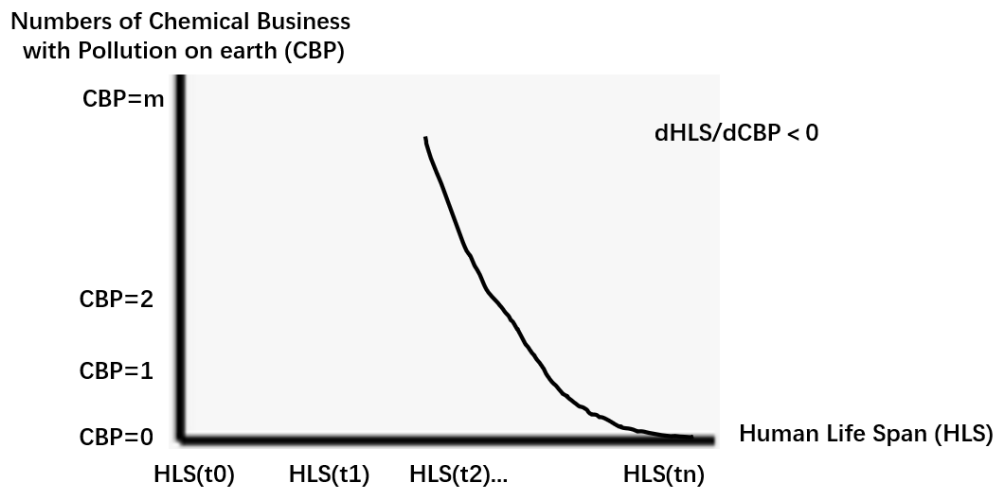

Diagram 5. The assumption of the relation of Chemical industry, pollution, and human health -- harmful

6. The assumption of the relation between machine and environment and human health– beneficial (for example: landscaping machines, human energy saving machines, industrial robots)

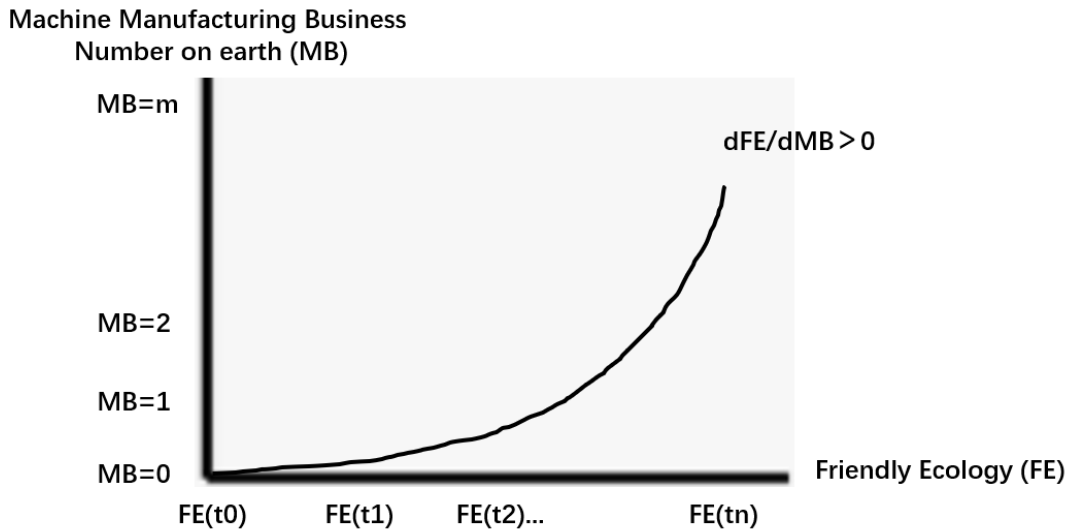

Diagram 6. The assumption of the relation between machine and environment -- beneficial

7. The assumption of the relation between auto and environment -- harmful

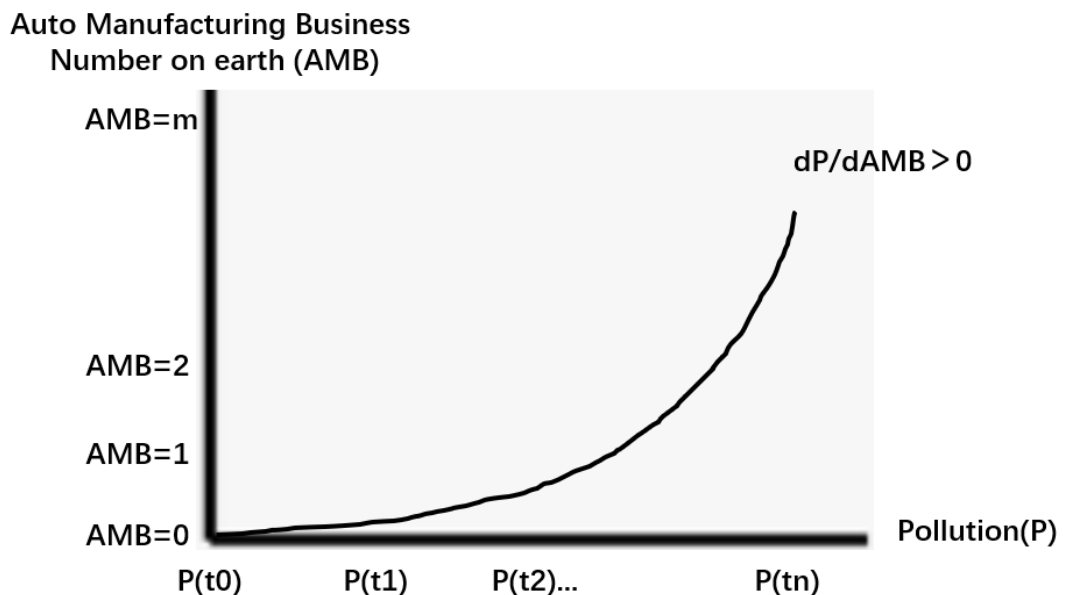

Diagram 7. The assumption of the relation between auto and environment -- harmful

8. The assumption of the relation of business number and scale, critical ecology, and human health in the 21st century (while the environmental pollution is already severe and the climate change has happened)

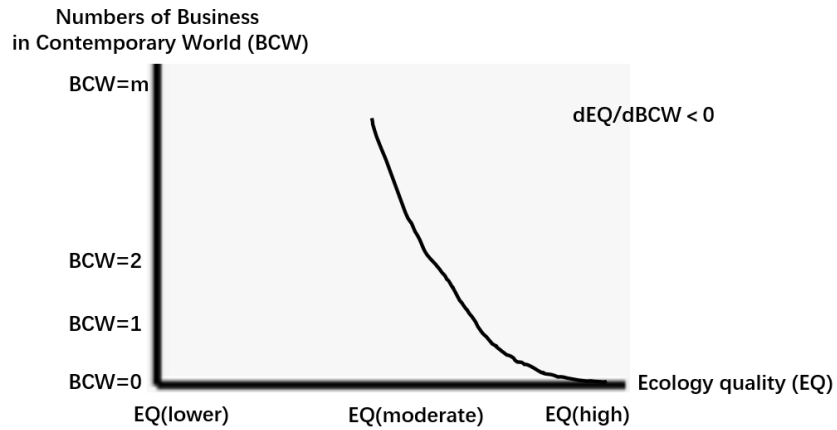

Diagram 8. The assumption of the relation of business number and scale, critical ecology, and human health in the 21st century

9. The assumption of the impact of the industry of environmental protection and renewable energy on Environment

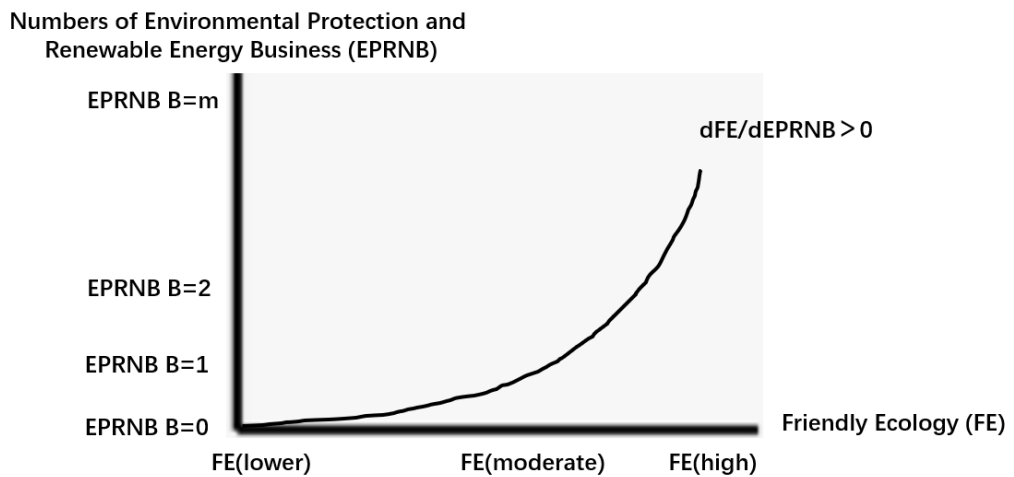

Diagram 9. The assumption of the impact of the industry of environmental protection and renewable energy on Environment

10. The anticipation of environment and climate change –we trust human being will do correctly

Human Self-adjustment on Industry (HSDI)

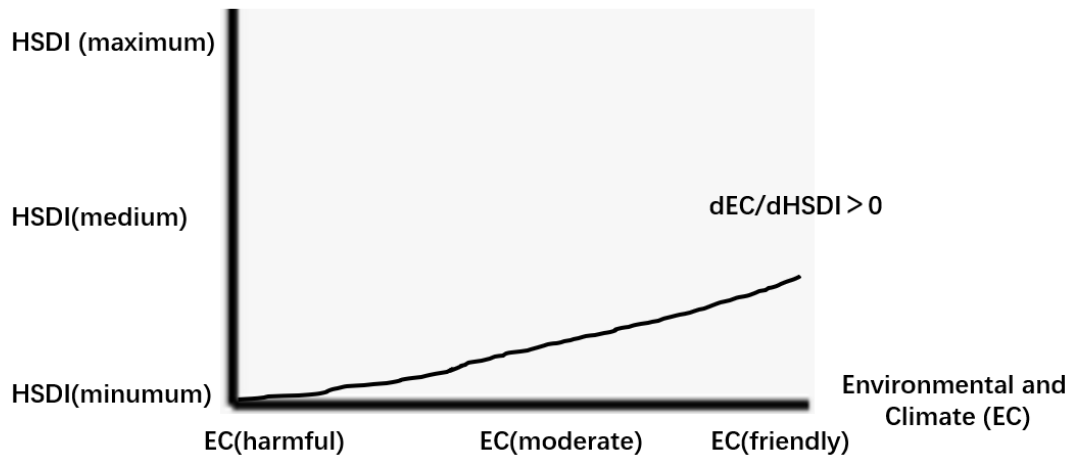

Diagram 10. The anticipation of environment and climate change

Note:

- 1 All the above diagrams are assumptions and anticipations, which needs data and empirical studies to verify.**
- 2. Moreover, the three-dimension or four-dimension diagrams may be more helpful to understand what happened, are happening, and will happen in the world.**
